# Creation of the template

The main reasons why we give a basic template to the students to work their code, is to focus mainly on the teaching unit objectives and **not on the user interface and the art style of the program.**

Therefore, we provide the basic template in a snap project xml file and a work assignment paper to give basic instructions about the template form and describe what we are expecting for them.

Most items on the screen are simple images that we can load as sprites on snap! All the button images can be created by various word or slide applications like power point or word.

On "Snap!" pushing a button can be easily implemented by writing a script under each icon
